Automatic Heating Control Solutions for Hotels

"Before we installed the Genius Hub, radiator valves were constantly being adjusted. Staff would reset after check out when they could, but would often forget and as a result we were heating a lot of empty rooms and spaces. We instructed independent energy reports to be undertaken at the hotel by Resource Efficient Scotland (funded by the Scottish Government) which recommended a Building Management System."

Nazim, Owner: SB Hotels, Glasglow

"We now have a solution that offers far more than the alternatives we had looked at, but at a quarter of the cost of other commercial systems. The Genius Hub has reduced the cost of heating our hotel by more than 40% which is actually higher than the projections presented by Genius Hub and the independent reports. What was most important for us was having the ability to be able to control everything from the reception desk, and to quickly respond to an individual guest's request."

Alastair, Owner: Longforgan Coaching Inn, Dundee

"Before we had the Genius Hub, radiator valves were constantly being adjusted and staff would reset them to 3 after checkout. We were heating a lot of empty rooms. With the Genius Hub, we have a solution that offers far more than the competition, at about a quarter of the cost of other commercial systems. What was most important to us was the ability of being able to control everything from the reception desk, and to quickly respond to an individual guest's request."

John & Mark, Owners: Chiseldon House Hotel, Swindon

About Us

The first Genius heating control system was launched in 2013, receiving positive reviews in national magazines and newspapers. Since then, our smart control solutions have been providing efficient and reliable heating control in thousands of properties, controlling tens of thousands of zones, including HMOs Nursing Homes, Schools, Childrens' Nurseries and Hotels.

We estimate that our customers are saving in excess of 6.8MWh every year - that's enough energy to keep over 77,000 typical LED light bulbs burning constantly! Our technology reduces CO_2 emissions by over 1,360 tonnes per year, and saves our customers over £480,000.

Our products are designed and manufactured in Birmingham UK by our dedicated team of software and electronic Engineers, giving you local personal attention. Our partners include energy specialists such as Get Solutions and industry leading hardware providers such as Danfoss. We work with Housing Associations and Local Authorities to provide efficient, reliable and user friendly heating controls to their tenants.

An independent study by Resource Efficient Scotland estimates that the Genius system have a potential savings between 23% to 38%.

The Genius Hub will pay for itself in the heating cost savings it makes.

All any room needs to get up to a 38% saving is:

Genius Radiator Valve **+** Genius Room Thermostat **or** Genius Room Sensor

"We have worked alongside many companies offering energy saving products, but I can honestly say Genius Hub has the best product I have seen. Customer feed back has been excellent, especially on the subject of aftercare. I am proud to be fitting such a great product for a company that shares my values of first class customer service, openness and honesty."

Jeff, Director: Mr Electric, Tamworth

Cut heating costs and keep your guests comfortable

Genius Hub allows you to reduce energy consumption by automatically turning down the heat in empty rooms. The system will reduce your energy bills and keep your customers comfortable, without your staff needing to adjust anything.
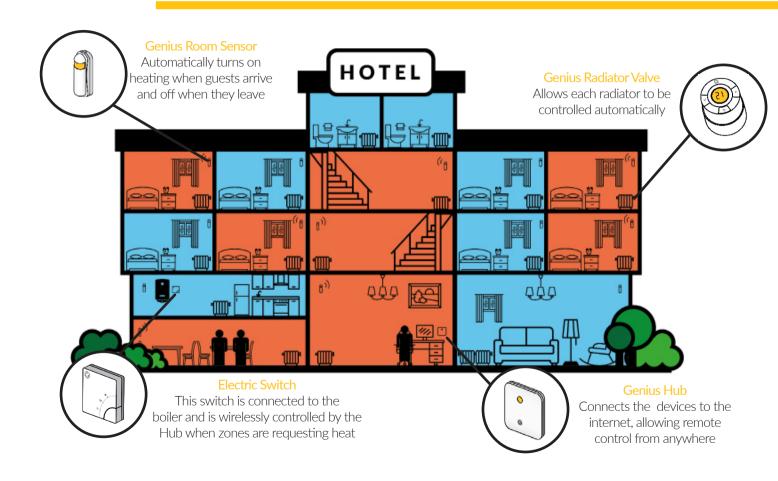

With Genius Smart Occupancy Detection rooms can trigger the heating automatically when a guest arrives. This allows the room to be kept at a lower temperature when unoccupied.

Guests can easily adjust the temperature, and the system will reset automatically before the next guest checks in. Optionally, staff can also turn vacant rooms off completely from reception.

WINNER OF
"energy efficiency product innovation"

Genius Hub - Installation

Genius Room Sensor
Automatically turns on heating when guests arrive and off when they leave

Genius Radiator Valve
Allows each radiator to be controlled automatically

Electric Switch
This switch is connected to the boiler and is wirelessly controlled by the Hub when zones are requesting heat

Genius Hub
Connects the devices to the internet, allowing remote control from anywhere

HOTEL

Benefits of professional installation with zero disruption

1 Wireless network mesh with a range extender in each room ensuring trouble free connectivity.

2 Room sensors detect when a room is occupied and automatically adjust the heat to the preferred temperature as set by management.

3 Discreet wireless room sensors with built in thermometers stick to the wall with pads or screws.

4 User friendly application for reception and maintenance desk to control and monitor the whole heating system from one place, including temperature control, battery levels and room occupancy.

5 Better management, greater guest comfort and fantastic control of heating means cost savings without compromise.

Support throughout...

Our installation teams provide rapid and professional installation and on-site support across the UK. In addition, our national HQ provides telephone technical support, offering rapid solutions to almost all issues and questions.
